## 2 Latex Documentation of Event-B models

### 2.1 Context

#### 2.1.1 c0

**CONTEXT** c0

**SETS**

NAME ENV6 - There are predefined set of names.

DATE ENV7 - There are predefined set of birthdays.

**END**

## 2.2 Machine

### 2.2.1 m0

**MACHINE** m0

**SEES** c0

**VARIABLES**

known  
birthday  
cards\_set

**INVARIANTS**

inv0\_1:  $known \in \mathbb{P}(NAME)$

ENV1 - There are birthdays for people.

inv0\_2:  $birthday \in NAME \rightarrow DATE$

ENV2 - Each known person's name is assigned to a birthday.

inv0\_3:  $known = dom(birthday)$

inv0\_4:  $cards\_set \in \mathbb{P}(NAME)$

**EVENTS**

**Initialisation**

**begin**

act0\_1:  $known := \emptyset$

act0\_2:  $birthday := \emptyset$

act0\_3:  $cards\_set := \emptyset$

**end**

**Event** AddBirthday  $\langle \text{ordinary} \rangle \triangleq$

REQ3 - Birthday book can add a person's birthday record.

**any**

name

date

**where**

grd0\_1:  $name \in NAME$

grd0\_2:  $date \in DATE$

grd0\_3:  $name \notin known$

**then**

act0\_1:  $birthday := birthday \cup \{name \mapsto date\}$

act0\_2:  $known := known \cup \{name\}$

**end**

**Event** ChangeBirthday  $\langle \text{ordinary} \rangle \hat{=}$

REQ 4 - The system can change a known person's birthday

**any**

name

new\_date

**where**

grd0\_1:  $name \in NAME$

grd0\_2:  $name \in known$

grd0\_3:  $new\_date \in DATE$

**then**

act0\_1:  $birthday(name) := new\_date$

**end**

**Event** Remind  $\langle \text{ordinary} \rangle \hat{=}$

REQ 5 - The system can query a set of people who have a given birthday to send birthday cards.

**any**

today

**where**

grd0\_1:  $today \in DATE$

**then**

act0\_1:  $cards\_set := dom(birthday \triangleright \{today\})$

**end**

**END**

### 2.2.2 m1

**MACHINE** m1

**REFINES** m0

**SEES** c0

**VARIABLES**

cards\_set  
names  
dates\_func  
count

**INVARIANTS**

inv1\_1:  $count \in \mathbb{N}$   
 inv1\_2:  $names \in 1..count \rightarrow NAME$   
 inv1\_3:  $dates\_func \in ran(names) \rightarrow DATE$   
 inv1\_4:  $ran(names) = dom(birthday)$   
 inv1\_5:  $ran(dates\_func) = ran(birthday)$   
 inv1\_6:  $\forall i. (i \in 1..count) \Rightarrow (dates\_func(names(i)) = birthday(names(i)))$   
 inv1\_7:  $\forall i, j. (i \in 1..count \wedge j \in 1..count \wedge i \neq j) \Rightarrow (names(i) \neq names(j))$   
 inv1\_8:  $\langle \text{theorem} \rangle names \in 1..count \mapsto NAME$

**EVENTS**

**Initialisation**

**begin**

act0\_3:  $cards\_set := \emptyset$   
 act1\_1:  $names := \emptyset$   
 act1\_2:  $dates\_func := \emptyset$   
 act1\_3:  $count := 0$

**end**

**Event** AddBirthday  $\langle \text{ordinary} \rangle \hat{=}$

REQ3 - Birthday book can add a person's birthday record.

**refines** AddBirthday

**any**

name  
date

**where**

grd0\_1:  $name \in NAME$

```

    grd0_2:  $date \in DATE$ 
    grd1_1:  $name \notin \text{ran}(\text{names})$ 
  then
    act1_1:  $\text{names}(\text{count} + 1) := name$ 
    act1_2:  $\text{dates\_func}(name) := date$ 
    act1_3:  $count := count + 1$ 
  end
Event ChangeBirthday  $\langle \text{ordinary} \rangle \hat{=}$ 
  REQ 4 - The system can change a known person's birthday
refines ChangeBirthday
  any
    name
    new_date
  where
    grd1_1:  $name \in NAME$ 
    grd1_2:  $name \in \text{ran}(\text{names})$ 
    grd1_3:  $new\_date \in DATE$ 
  then
    act1_1:  $\text{dates\_func}(name) := new\_date$ 
  end
Event Remind  $\langle \text{ordinary} \rangle \hat{=}$ 
  REQ 5 - The system can query a set of people who have a given birthday to send
  birthday cards.
refines Remind
  any
    today
  where
    grd0_1:  $today \in DATE$ 
  then
    act0_1:  $cards\_set := \text{dom}(\text{dates\_func} \triangleright \{today\})$ 
  end
END

```

### 2.2.3 m2

**MACHINE** m2

**REFINES** m1

**SEES** c0

**VARIABLES**

cards  
names  
count  
dates  
lock  
cursor  
CB\_name  
CB\_new\_date  
RM\_today  
cards\_count

**INVARIANTS**

inv2\_1:  $dates \in 1 \dots count \rightarrow DATE$

inv2\_3:  $\forall i \cdot (i \in 1 \dots count) \Rightarrow (dates\_func(names(i)) = dates(i))$

inv2\_4:  $lock \in \{0, 1, 2\}$

inv2\_5:  $cursor \in \mathbb{N}$

inv2\_6:  $CB\_name \in NAME$

inv2\_7:  $CB\_new\_date \in DATE$

inv2\_8:  $RM\_today \in DATE$

inv2\_9:

$(lock = 0) \Rightarrow ($

$cursor \in 0 \dots count))$

0 means AddBirthday / ChangeBirthdayStart / RemindStart is possible

inv2\_10:

$(lock = 1) \Rightarrow ($

$count \geq 0 \wedge$

$CB\_name \in \text{ran}(names) \wedge$

$CB\_name \notin names[1 \dots cursor - 1] \wedge$

$CB\_name \in names[cursor \dots count] \wedge$

$cursor \in 1 \dots count)$

1 means ChangeBirthday is happening

```

inv2_11:  $cards\_count \in 0 \dots count$ 
inv2_12:  $cards \in 1 \dots cards\_count \rightarrow NAME$ 
inv2_13:
  ( $lock = 2$ )  $\Rightarrow$  (
     $count \geq 1 \wedge$ 
     $cursor \in 1 \dots (count + 1) \wedge$ 
     $cards\_count < cursor$ 
  )
  2 means Remind is happening

```

## VARIANT

$count - cursor$

## EVENTS

### Initialisation

#### begin

grd2.2:  $cursor > count$

**with**

today:  $today = RM\_today$

**then**

act2.1:  $lock := 0$

act2.2:  $cursor := 0$

**end**

**END**

### 3 Final Code For Remind Event Using Merging Rules

#### 3.1 Original Event-B Events from m2

```

RemindStart
  any today where
    today ∈ DATE
    today = 0
    count ≥ 1
  then
    lock := 2
    cursor := 1
    RM_today := today
    cards := ∅
    cards_count := 0
  end

```

```

RemindProgressCollect
  when
    lock = 2
    cursor ≤ count
    dates(cursor) = RM_today
  then
    cursor := cursor + 1
    cards(cards_count + 1) := names(cursor)
    cards_count := cards_count + 1
  end

```

```

RemindProgressIgnore
  when
    lock = 2
    cursor ≤ count
    dates(cursor) ≠ RM_today
  then
    cursor := cursor + 1
  end

```

```

RemindFinish
  refines Remind
  when
    lock = 2
    cursor > count
  then
    lock := 0
    cursor := 0
  end

```

### 3.2 If-Merge RemindProgressCollect and RemindProgressIgnore to RemindProgress

#### RemindProgress

---

```
when
    lock = 2
    cursor  $\leq$  count
then
    if ( dates(cursor) = RM_today ) then
        cards(cards_count + 1) := names(cursor)
        cards_count := cards_count + 1
    end
    cursor := cursor + 1
end
```

### 3.3 While-Merge RemindProgress and RemindFinish to RemindProgressFinish

#### RemindProgressFinish

---

```
when
    lock = 2
then
    while ( cursor  $\leq$  count ) then
        if ( dates(cursor) = RM_today ) then
            cards(cards_count + 1) := names(cursor)
            cards_count := cards_count + 1
        end
        cursor := cursor + 1
    end
    lock := 0
    cursor := 0
end
```

### 3.4 Init-Merge RemindStart and RemindProgressFinish to RemindRoutine

**RemindRoutine** (today: DATE)

# Precondition: lock = 0 and names.count  $\geq$  1

---

```
lock := 2
cursor := 1
RM_today := today
cards.make_empty
cards_count := 0
while ( cursor  $\leq$  count ) then
    if ( dates(cursor) = RM_today ) then
        cards(cards_count + 1) := names(cursor)
        cards_count := cards_count + 1
    end
    cursor := cursor + 1
end
lock := 0
cursor := 0
```
